

Web Design & Dev Test Task

Goal

Recreate the provided shopping website design using the Figma reference.

We're looking for ~**80% visual + structural accuracy**, along with functional implementation.

What we care about

- Clean layout and spacing
 - Matching UI structure from Figma
 - Basic responsiveness
 - Good code structure (not messy or overcomplicated)
 - Intermediate understanding of frontend + backend connection
-

Tech

- Use whatever you're comfortable with (React, Vue, vanilla HTML/CSS/JS, etc.)
 - Backend can be simple (no need to over-engineer)
 - Keep everything practical and clean
-

Backend (Basic Requirement)

To evaluate real-world development skills, include the following backend features. Keep implementations simple and functional.

1. Newsletter / Email Capture (Required)

- Connect the “Join Shopping Community” section to a backend
 - Store submitted emails in a database or backend service
 - Add advanced validation (no empty or invalid emails)
-

2. Product Data via API (Required)

- Do NOT hardcode product data directly in the UI
 - Fetch product list (e.g., New Arrivals section) from a backend/API or mock server
 - Use a clean data structure (title, image, category, optional price)
-

3. Simple Wishlist / Favourites (Optional but Recommended)

- Allow users to mark/unmark items as favourite
 - Store state (local Storage or backend)
 - Reflect UI changes properly
-

Backend Tech (Flexible)

You can use any approach you’re comfortable with:

- Firebase / Superbase (recommended for speed)
 - Node.js + Express
 - Simple mock API (if structured properly)
-

How we'll evaluate

- How closely you match the design
 - Code cleanliness and structure
 - UI attention to detail
 - Responsiveness
 - Basic backend integration (API usage, form handling, data flow)
 - Overall execution quality
-

Deadline

You have **48 hours** from receiving this task.
Late submissions won't be reviewed.

- Live link (preferred)

Reply directly to the email when done.

Note

This isn't about perfection, it's about how you think and build real interfaces.
Keep it simple, structured, and functional.
